**Environmental Policy: Transnational Issues and National Trends** Caldwell Lynton K.

This edited collection provides a cross-sectional review of environmental legislation and administration in the United States, with comparative chapters relating to Canada and New Zealand. The experts look at a variety of environmental issues that create policy problems, and while the book offers no blueprint or prognosis of environmental policy in the twenty-first century, it does offer insights into trends that will influence the future shape of that policy.

The book is prefaced by an overview of the environment as a problem for policy by Lynton K. Caldwell, who has been credited with inventing the term environmental policy. Experts examine the role of risk analysis in policy making; the transnational issues associated with NAFTA and GATT are discussed; and the efforts of the Environmental Protection Agency to integrate policy and administration are described. The perspective of the authors is transnational, with several chapters focusing primarily on U.S. policy.
